

Jerry Enrique Sánchez Betancourt

Roles: Software Developer, System Engineering, and Data Analyst

Migratory Status: Poland Blue Card (karta pobytu), USA B1/B2

E-mail: jerrysb7788@gmail.com

CARRER SUMMARY

I'm an experience bachelor in system engineering from Peru with more than a decade of expertise in the software industry. My professional journey encompasses diverse aspects of software development, like engineering, data, operations, support, automation, and optimization. I am proficient at swiftly adapting to new projects and have played key roles in various projects, demonstrating my ability to work independently when needed. I enjoy contributing in open source initiatives and assisting other team areas. I excel at enhancing team performance by leveraging my technical expertise and leadership skills to guide projects and teams to success. At this time, I am the internal team leader and I work on gathering project requirements, coordinating the progress of our efforts with the manager, and handling difficult tasks or assisting teammates with their blocked tasks. Staying in line of the latest industry trends, my current focus is around Data, AI, and Cloud Engineering.

SKILLS

Proficiency

Python – Google Cloud Platform (**GCP**) – **SQL** – **GO** – GIT – Pandas – FastAPI – **Ollama** – CI/CD – Teams – **Terraform** – **SRE** – IaC

Former

PostgreSQL – Django – Hive – Numpy – NLTK – **Airflow** – Hadoop – Zeppelin – Notebooks – Spark – **C#** – Net. Framework – ASPNET – HTML – CSS2/CSS3 – PHP – Java – JavaScript – Docker – Typescript – SQL Server Integration Service – Azure – AWS.

LANGUAGES

English (Advanced) – **Spanish** (Native)

EDUCATION

Universidad Privada del Norte (Trujillo, Perú)

- Bachelor of System Engineering (2011)
- Diplomat System Audit and Information Security (2013)
- Diplomat Process and Continuous Improvement (2014)
- Diplomat Academic Research (2015)

Relevant Certifications

- [Professional Cloud Architect \(2023\)](#)
- [Professional Data Engineer \(2022\)](#)
- [Associate Cloud Engineer \(2021\)](#)

- [Microsoft Professional Program Data Science \(2020\)](#)
- [Python for Research \(2020\)](#)
- [WES Verified International Qualifications, Canada \(2020\)](#)

CAREER HISTORY

Software Engineer, EPAM Systems

Jan-2023 - Present

Projects:

- Implementation of an internal testing framework for client internal distribution systems.
- Implementing of internal monitoring dashboards using client internal framework.
- Developing backend system processors to feed client metrics.
- Migrating infrastructure as code legacy applications to new client framework.
- Participating in Open Source projects and assisting internal EPAM team's through tasks cooperation.

Project Role: Software Engineer as a Site Reliability Engineer

Responsibilities:

- Developing test cases to mock servers and applications to fit client target test cases.
- Building dashboards within the Python framework provided by client in a timely manner.
- Providing solutions and refinement to the framework to overcome limitations vs expectations.
- Creating processors in Go to handle data subscriptions. Transforming data to match expected output data. Build consumers to handle raw data.
- Migrate customer applications using infrastructure as code client dedicated tooling.
- Manage internal customer as access was limited and requirements need to be tune with the expectations.
- Interim team lead. Providing status updates to management and clients, processing requirements and assisting team members facing stoppers or challenges.

Tech Stack: Customer Internal Tools, Python, Go, Bazel, GCP, Lua, Terraform, IaC

Support Engineer, EPAM Systems

Apr-2022 – Dec-2022

Project:

- The project focuses on delivering technical assistance to Kubernetes and GCP users via public forums. Engineers address user queries, received as internal tickets, ensuring responses align with established contractual SLAs.

Responsibilities:

- Assisted customers in resolving technical issues by providing code fixes, samples, debugging support, and relevant documentation links.
- Collaborated with Client engineers to debug issues, gather necessary information, and replicate code to streamline the debugging process.

Tech Stack: Google Cloud Platform, Python, Command Shell, Java, Go, C#, Google Cloud Shell, Vertex AI, Data Proc, Airflow, Big Query, Pub/Sub, Code Repository, Compute Engine, Notebook, Stack overflow

Software Developer III, TRANZACT

Jan-2021 - Aug-2021

Project:

- Implementation of our data ingestion process with Apache Airflow. The purpose of the project was to integrate airflow workflow framework into our internal data ingestion processes. DAG Requirements are relate to each customer particular data ingestion process.

Responsibilities:

- Key Developer at building core operators for enterprise data management team.

- Part of the development team charged to build customized operators, controllers and DAGs Flows
- Part of design group tasked to create flows for our data processes.
- Part of the standardization group and good code practice efforts within the team.
- Document and usage guide instructor.

Tech Stack: SQL Server, PostgreSQL, Visual Studio Code, Jira, Git, TeamCity, Octopus, Apache Airflow, CPython, Pandas, PyODBC, Psycpg, SFTP

Software Developer III, TRANZACT

Jun-2020 - Dec-2020

Project:

- Hadoop POC. It was a project initiated by our company to have Hadoop advantages integrated in our process. Core task was to develop to align company data to the many applications within Hadoop ecosystem.

Responsibilities:

- Responsible to handle large datasets and optimize the code for data handling and retrieval.
- Data synchronization between Hadoop and enterprise data management supported databases.
- Responsible to perform routine maintenance to our applications and refinement of our datasets.

Tech Stack: Hbase, SQL Server, Apache Hadoop ecosystem tools, Visual Studio Code, Jupyter Notebooks, Jira, Bitbucket, CPython, Pandas, HappyBase, .NetCore, Hive, Go

Software Developer III, TRANZACT

Jan-2019 - May-2020

Project:

- Internal Customer Support. This project focused on provide data based on customers request. Interact with customer and assist them with the data requirements through our internal client databases. Provide maintenance and fix bugs of our core data exchange application.

Responsibilities:

- Support clients data request in compliance with the company standards and specifications
- Build applications to allow data sharing among company applications
- Maintenance of internal data ingestion and processing system

Tech Stack: SQL Server, PostgreSQL, Visual Studio Code, SQL Management Studio, Azure Data Studio, Jupyter Notebooks, SQL Server, Python, Pandas, RDBMS

Software Developer II, Cignium Technologies

Aug-2017 - Dec-2018

Project:

- Legacy System Support. Project was focus on providing maintenance and support on the usage of our legacy systems. Help internal customers establish client campaigns for our call center as it make usage of the legacy system. Fix bugs or made adjustments to the legacy system.

Responsibilities:

- Create campaigns, agents with the legacy app.
- Fix BAU issues within the legacy system.
- Generate Ad-Hoc Reports for our internal customers.

Tech Stack: SQL Server, SQL Management Studio, Lead and Agent Data Management System (Legacy), Jira, Git, SQL Server, Fox Pro

Software Developer II, Cignium Technologies

July 2016 - Jun-2017

Project:

- Report Generation. The scope of this internal project was to develop reports for our internal processes, see our client's revenues, performance and attention stats as well as the health of the many branches that our customers fit. It also involves, a lot of interactions among the head of the business branches and adjustments to fit the reports scope.

Responsibilities:

- Develop reports using reporting services and visual studio
- Interact with stakeholders to meet each report scope
- Generate Ad-Hoc changes as this was an organic initiative from our organization

Tech Stack: SQL Server, Reporting Services, Jira, Git, SmartGit

Software Developer, Cignium Technologies

Jan 2015 - Jun-2016

Project:

- Various Web Applications Maintenance and Migration to PHP to a POC maintainer.

Responsibilities:

- Provide maintenance during migration of business web applications
- Update web applications to meet requirements

Tech Stack: SQL Server, PHP, Visual Studio, C#, ASP NET MVC, CSS, HTML, Git, SmartGit

Software Developer, Cignium Technologies

Jan 2014 - Dec-2015

Project:

- Internal customer data processing. Project focusing on handling customer requirements points to meet customer deadlines. Bring support to address conflict points with customer. Provide maintenance and assistance to released changes.

Responsibilities:

- Handle campaigns and agents data SSIS workflows.
- Generate Ad-Hoc Reports for our internal customers.

Tech Stack: SQL Server, SQL Management Studio, SISS, Jira, SQL Server, Git, SmartGit

Software Developer, MIQ Logistics

Sep 2013 - Dec 2013

Project:

- Software Development. Project was focus on optimizing the current system and reduce the error margin of the system. It involve a lot of code optimization and system reprocess in order to meet customer deadlines and green status for their daily operations.

Responsibilities:

- Dive inside legacy code, optimize and improve performance of our internal web application.
- Fix BAU issues within our systems.
- Generate Ad-Hoc Reports for our internal customers.

Tech Stack: SQL Server, ASP .NET MVC, HTML, CSS, Application Systems

**System Engineer, National
Superintendence of Customs and Tax
Administration (SUNAT)**

Jan 2012 - Dec 2012

Project:

- System Support. Professional Practice. It focused on product maintenance. Design and develop customer requirements, propose new ideas to solve BAU issues, do routine maintenance. Propose new applications to the different areas inside the organization area.

Responsibilities:

- Assist organization customer with new functionality within the applications.
- Create archiving applications for our internal customer.
- Fix BAU issues within their systems.
- Generate Ad-Hoc Reports for our internal area.

Tech Stack: MySQL, PHP, JAVA, CSS, HTML, Application Systems
